

PolarPlex™ SPS

Patented Suspended Panel System

PolarPlex™ Suspended Panel System (SPS)

A patented aisle containment panel with an innovative quick connect and quick removal design that enables each vertical panel to hang straight and strong. This rigid containment system is ideal for hot aisle containment and a great alternative to vinyl curtains. It is ceiling suspended and rack independent, not supported by server cabinets.

Lightweight

The system is constructed of anodized aluminum channels and twin-wall panels. A 4' x 4' PolarPlex™ SPS panel weighs only about 7 lbs, making them easy to handle. The rigid twin-wall material is effective for containing air movement and clear which allows light to pass into the aisles.

Quick Connect/Quick Removal

With the SPS special channel design the panels easily hook on for installation and are just as easily lifted off for removal. No tools are required. This unique feature makes installations go fast, gives quick access for maintenance, and makes removal for cleaning easy.

Materials

Twin-Wall Panels

Material	Twin-Wall Polycarbonate
Fire Safety	ASTM Class A flame and smoke spread
Color	Clear
Thickness	8 mm
Weight	0.30 lbs/square foot

Solid Panels

Material	CPCV
Fire Safety	ASTM Class A flame and smoke spread
Color	Clear with Blue/Gray Tint
Thickness	0.125"
Weight	1.06 lbs/square foot

Mounting Channels

Material	Extruded anodized aluminum
Weight	1.25 lb/linear foot
