

PolarPlex™ P2 Sliding Door

Adjustable Height & Auto-Closing Containment Door

PolarPlex™ P2 Sliding Doors are adjustable in height to contain 42U racks up to 50U racks.

One Size Fits All

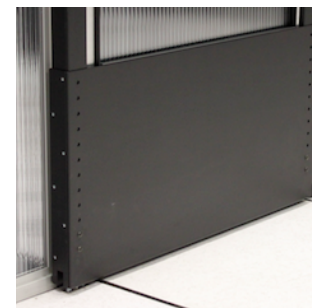

The P2 Sliding Containment Door solves the problem of sizing a containment door for varying aisle widths and rack heights. The dual door is 54" wide so it covers most "4 foot aisles". The single sliding door is 37.5" wide. Side extender panels expand the aisle width coverage up to 8'. The doors and side extender panels are adjustable in height from 79" to 89". With this design approach, one door covers virtually every door size requirement.

Short Lead-Time

This one-size-fits-all design allows the doors and extender panels to be kept in stock, making the lead-time just a few days.

Smart Features

Auto-close is standard. A "hold open" kit is available and installs in seconds. There are twin-wall and clear Lexan options for the door's insert, which are field replaceable so repairs are quick and easy.
